Casino Promotions Impact

Campaign Type

All

Player Segment

All

Net Lift Per Player

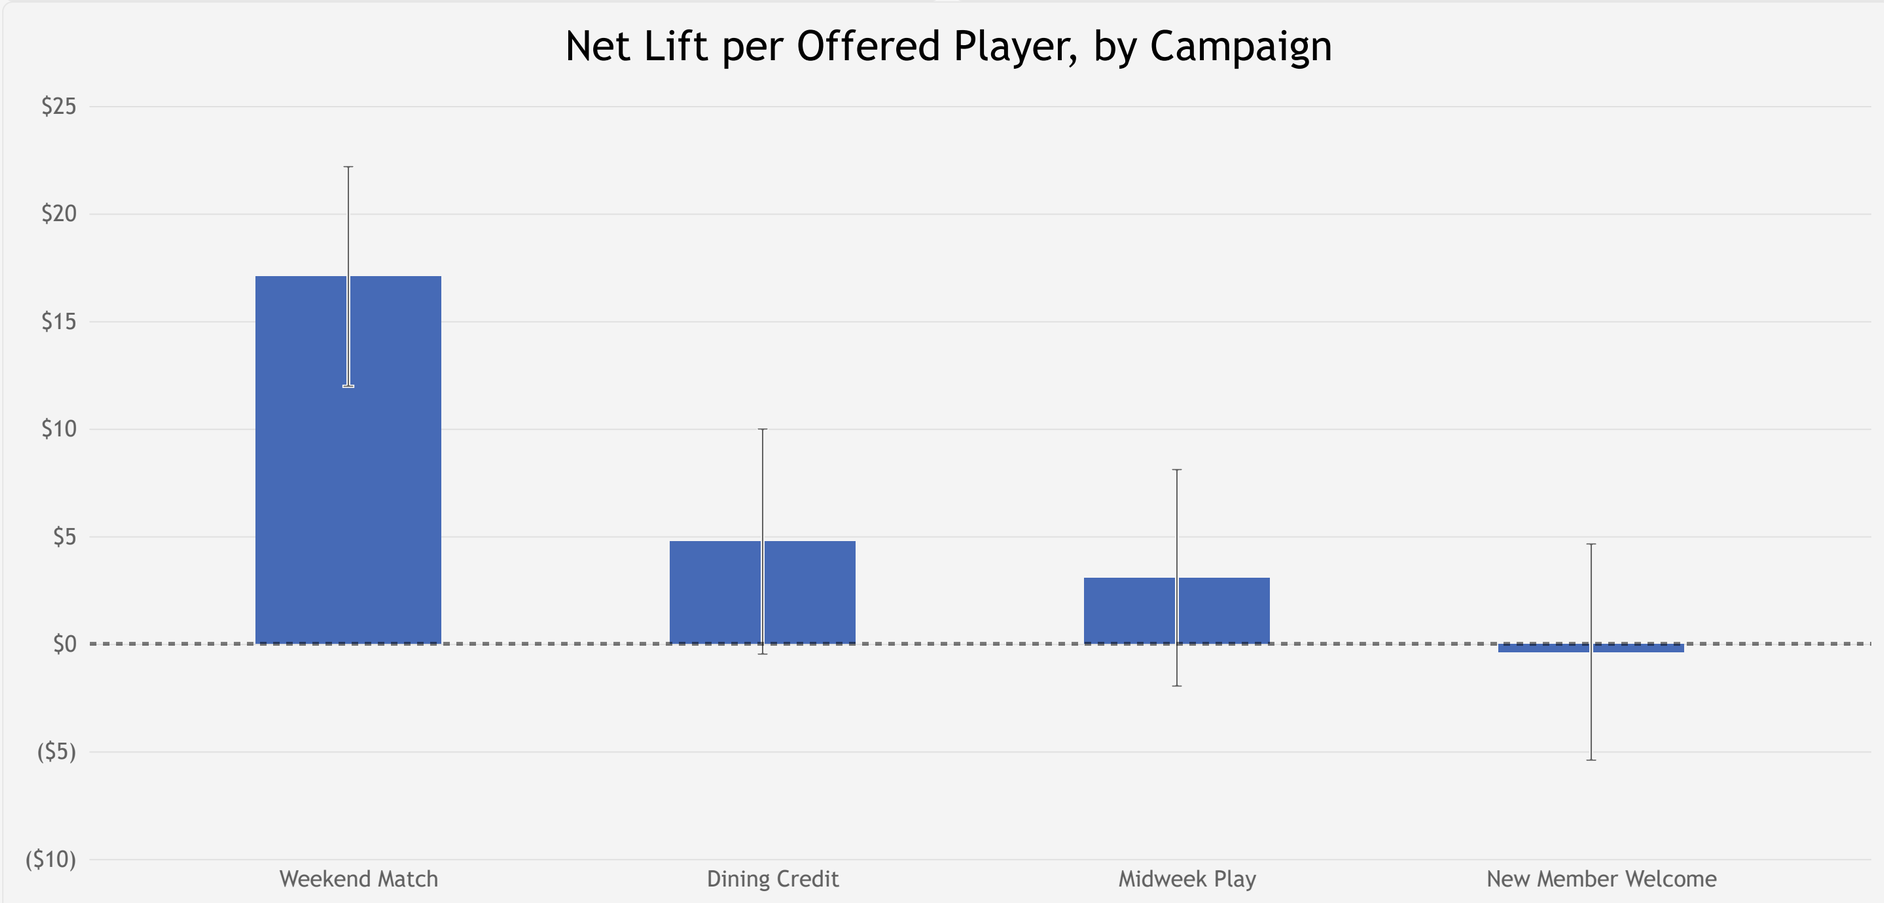

$6.13

Total Net Impact

$117,656

Key Findings

- Promotions earned $6.13 net per offered player, or $117,656 in total after promo cost.
- Weekend Match drove ~70% of that gain (+$17 per player). This is the only campaign with a proven positive result.
- Dining Credit and Midweek Play are likely positive, but the data can’t rule out $0.
- New Member Welcome shows no return, even though it had the most expensive offer ($30).

Offer vs Holdout

Offered players came back more and played more, even after promo cost.

Campaign Type

All

Player Segment

All

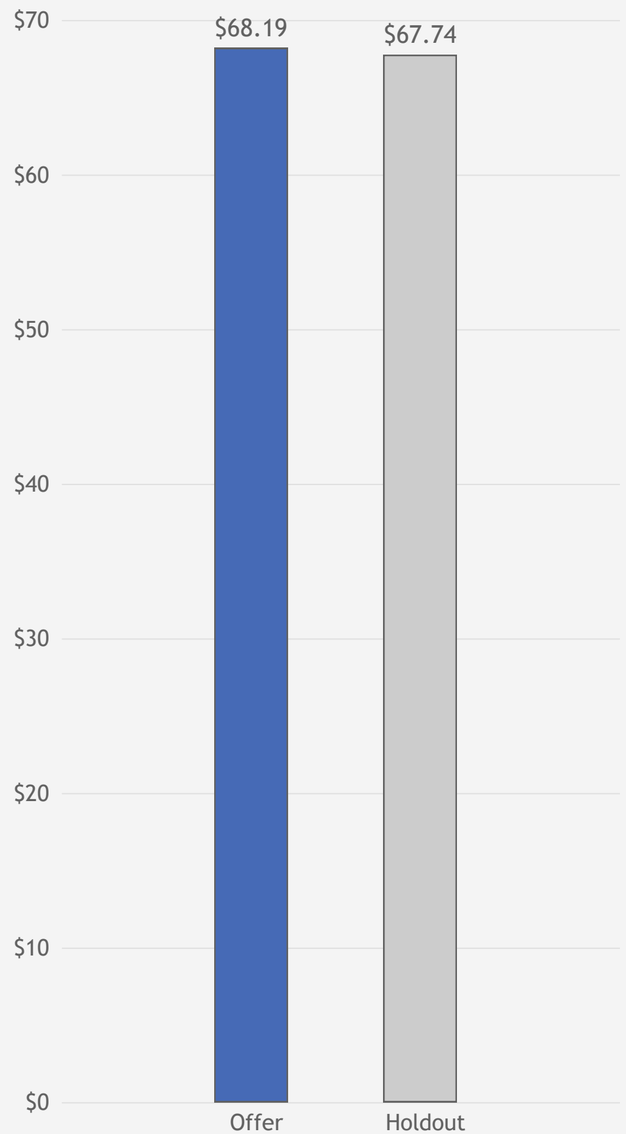

Redemption Rate

25.9%

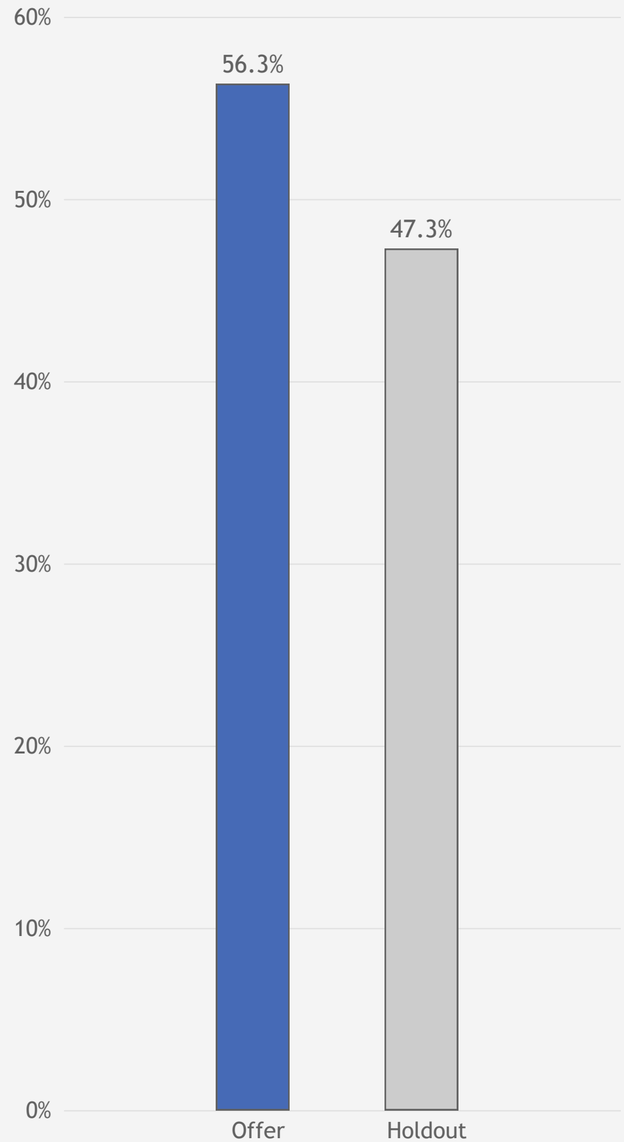

Key Takeaways

- Both groups played about the same before the campaign, so the comparison is fair.
- More offered players came back: 56% vs. 47%.
- About 1 in 4 offered players used their offer.
- Even after paying for the offers, offered players were worth about $6 more each.

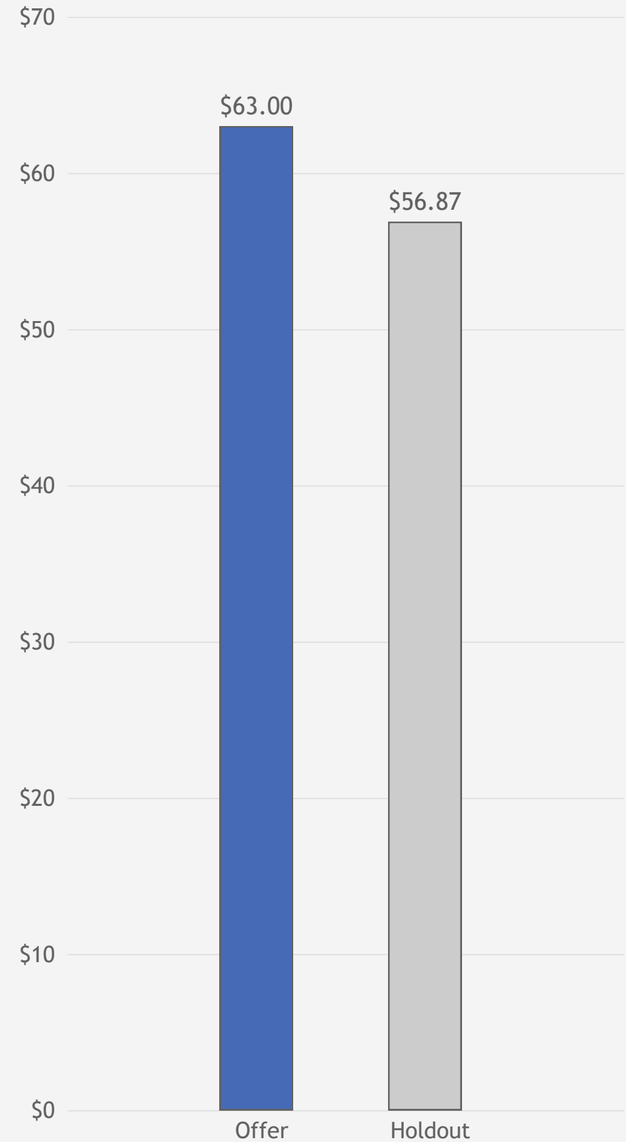

Before: The groups were alike

Offered players came back more

Net revenue after promo cost

Calculated column	Measure
Column	Table

Name	Object Type	Description	Table
assignment_id	Column	Assignment the offer belonged to. Key to Player Summary.	Redemptions
assignment_id	Column	Unique ID of the player's campaign assignment. Key to Redemptions.	Player Summary
Avg Net Revenue (Holdout)	Measure	Average revenue per held-out player (no promo cost).	Key Measures
Avg Net Revenue (Offer)	Measure	Average revenue minus promo cost per offered player.	Key Measures
Avg Pre Revenue (Holdout)	Measure	Average revenue per held-out player in the 28 days before assignment.	Key Measures
Avg Pre Revenue (Offer)	Measure	Average revenue per offered player in the 28 days before assignment (should match holdout).	Key Measures
Avg Promo Cost per Offer Player	Measure	Average promo cost per offered player, including those who did not redeem.	Key Measures
Avg Revenue (Holdout)	Measure	Average response-window revenue per held-out player.	Key Measures
Avg Revenue (Offer)	Measure	Average response-window revenue per offered player, before promo cost.	Key Measures
breakdown	Column	Level of the slice: Overall, Campaign, Segment, Property, or Campaign x Segment.	Campaign Results
Campaign Results	Table	Pre-calculated offer-vs-holdout results with 95% confidence intervals, one row per slice. Filter 'breakdown' to one level (e.g. Campaign) before using it in a visual. Source: campaign_results.csv.	Campaign Results
